

Seeking Research Participants: **Autistic Adults who are Minimally Verbal or Nonverbal**

We want to learn more about emotional health and markers of depressed mood in people who do not use much verbal speech.

We are inviting adults to participate in a research study. Participants will answer questions about their thoughts and feelings, and they will look at faces on a computer screen. Participants must:

- Be 18 45 years old
- Have a diagnosis of an autism spectrum disorder (ASD)
- Communicate with single words or phrase speech, or use no spoken words
- Be able to walk, see, and hear
- Have a parent or close caregiver who is also willing to participate
